

DIRECT ACCESS PROGRAM

See a better world.®

Direct Access Program

In partnership with fellow Maxar Technologies company MacDonald, Dettwiler and Associates Ltd. (MDA), DigitalGlobe's Direct Access Program establishes a trusted alliance with select defense, intelligence and commercial customers to provide priority access to the industry's highest resolution, accuracy, and spectrally diverse constellation of satellites. Through an emphasis on security, a high level of service, and DigitalGlobe's fastest available throughput from collection to product, the Direct Access Program gives customers the ability to integrate the DigitalGlobe constellation, including RADARSAT-2, with their existing source architecture without the cost or resource burden associated with satellite ownership. Sales of Direct Access Facilities are contingent on U.S. and/or Canadian Government review and approval.

Features & Benefits

Local control

- Manage the complete imagery life cycle to maximize yield against your own geospatial requirements

Responsive tasking cycle

- Task within an hour of an imaging event and receive data in real-time

Security

- Encrypted and confidential planning, tasking and delivery mechanisms ensures secure end-to-end workflow

WorldView constellation

- Access to the most capable, technologically advanced electro-optical constellation in the world

High priority

- Highest commercially available tasking priority

Onsite product processing

- Create custom products and generate digital elevation models locally

Data ownership options

- Customer selects exclusive content ownership or DigitalGlobe license

Assured access

- Service level agreement guarantees dedicated capacity and delivery timelines

DIRECT ACCESS FACILITY ANTENNA

DIRECT ACCESS FACILITY EQUIPMENT

DIRECT ACCESS FACILITY SOFTWARE

Ground station facility

Direct Access Facility (DAF)

- Fully integrated, customer operated, WorldView-class ground station, acquires data in various modes including direct tasking, downlink-only and virtual delivery with onsite product creation

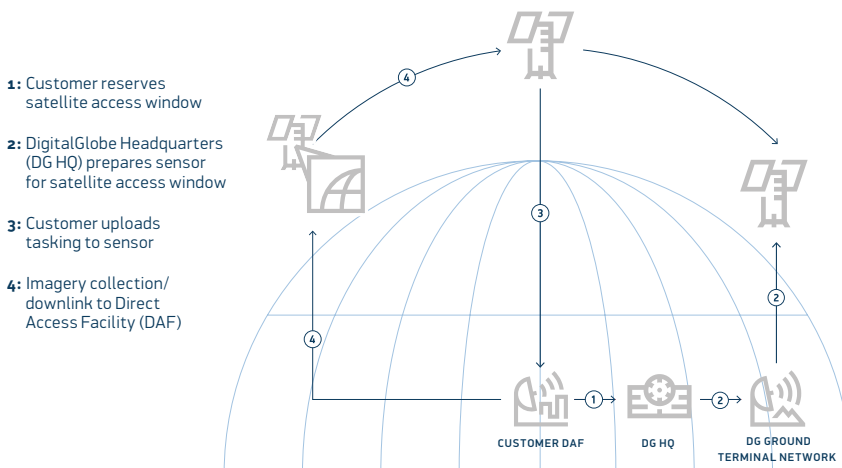

Virtual Tasking/Virtual Downlink Direct Access Facility (VT/VL DAF)

- Provides order management, collection planning, indirect tasking (DigitalGlobe performs uplink), area orders, virtual ground terminal (VGT) delivery, archiving, cataloging and product processing functionality for DAF customers without an antenna system.

Access options

- 1: Direct Tasking** – satellite imaging and maneuvering is securely planned at the customer site via an allocated Satellite Access Window (SAW); customer then uplinks tasking and downlinks imagery to the ground station (DigitalGlobe constellation only)
- 2: Premium Indirect Tasking** – high-priority tasking planned securely by the customer, executed by DigitalGlobe for its constellation, and MDA Geospatial Services Incorporated (GSI) for RADARSAT-2, imagery can be downlinked at the customer site or is delivered raw via FTP securely and privately
- 3: Imagery Archive Ordering** – tap into the largest high-resolution commercial archive in the world and have images delivered via FTP for rapid onsite processing

Direct Tasking Operational Scenario

Support services

Through the DigitalGlobe/MDA partnership additional services are offered that make it easier than ever to implement the Direct Access Program.

Program Management Services

- Includes optional project management, facility integration, design, engineering, maintenance, and user training

Account Management Services

- Includes personalized operational and contractual support, tasking and order placement support, and priority tasking management

Technical Support Services

- 24/7 tier 1 help desk support and access to tier 2 and tier 3 engineering and development resources for ongoing operations and maintenance

Customizable Services for your Mission

- Subscription service to a custom suite of DigitalGlobe finished imagery products and information services in a variety of formats
